TABLE OF CONTENTS

EXECUTIVE SUMMARY

Cryptocurrency is a digital or virtual currency that is designed to function as a medium of exchange. It uses cryptography to secure and verify transactions and to control the creation of new units of a particular cryptocurrency. Basically, a cryptocurrency is a limited entry in a database that cannot be changed unless certain conditions are met.

There have been many attempts to create digital currencies during the boom of the 90s technology, with systems such as Flooz, Beenz and DigiCash appearing on the market but certainly failed. There are many different reasons for their failures, such as fraud, financial problems and even friction between company employees and their bosses.

In particular, all of these systems use the Trusted Third Party approach, which means that the company behind them verifies and facilitates transactions. Because of the failure of these companies, the creation of a digital money system was seen as a cause that was lost for a long time.

Then, in early 2009, an anonymous programmer or group of programmers under the alias Satoshi Nakamoto introduced Bitcoin. Satoshi described it as a peer-to-peer electronic cash system. ' This is fully decentralized, meaning that no server is involved and there is no central control authority. This concept is very similar to peer-to-peer networks for sharing files.

In our opinion a new invention or technology will be easily accepted if the invention or technology is able to provide benefits that can be felt directly by all levels of society. Almost everyone now knows Bitcoin and Altcoin, but only a few people understand the benefits that can be provided with the existence of products from Cryptography and Blockchain technology. We believe that if the benefits of all products produced from Cryptography and Blockchain technology can be felt directly by all levels of society, the growth rate of Crypto-token users worldwide will increase sharply.

INTRODUCTION TOKEN SOCIAL NETWORK

The SCN project is Unique and the first of its kind - creating a decentralized peer-to-peer market for globally traded commodities and finished goods and also decentralized exchange of crypto-to-commodity assets as two of its main Ecosystems. Everything is supported by the Blockchain Technology to provide Transparency, Security, Ease of Transactions, Better financial settlement, and financial structure that is enhanced by the community for producers / producer communities.

We are targeting this project to target lay people who have not known anything at all about the world of Crypto-tokens and their application in everyday life. The approach used is designed in such a way that the process of introducing and learning to ordinary people can take place easily, pleasantly, profitably and regrow the spirit of cooperation and help in each individual directly involved in this project.

STELLAR DISTRIBUTED EXCHANGE

Implementing our Stellar Lumens technology makes it easy to move digital assets around the world, fast, reliable, and also empower Satoshi's true vision.

The existence of SDEX or Stellar Distributed Exchange in the Stellar network is very beneficial for us because the SCN Ecosystem Tokens that we form in communities automatically become more complete. So, besides being able to be exchanged for products or services provided by SCN Community members in Online Marketplace, Social Points obtained by community members can also be exchanged with Lumens (XLM) coins or other tokens found on Stellar network using SDEX clients such as : stellarport.io and interstellar.exchange.

The main reason we chose Stellar Network was because of the blockchain capability, network and infrastructure that Stellar has, it was very possible for us to apply the strategies that we planned compared to other Blockchain. On the Stellar Blockchain it tends to have stable prices, fast transactions and light transaction fees.

Since the beginning Social Points are routinely given daily to SCN Community members who fulfill the requirements, it is planned to be made in digital format. Through a long research we finally decided to create an SCN Token that will be used as the Social Point on the Stellar Blockchain.

OUR VISION

We have a vision to build a crypto token ecosystem that can improve the lives of people around the world. Cryptto token ecosystems will be built in each population area using community-based approaches in the spirit of family and mutual cooperation.

We hope this token will continue to spin and provide various benefits that can prosper the economy for the SCN community members

We want people in this ecosystem to at least not need to think about their basic needs because there is a system that can meet those needs

OUR MISSION

Our current mission is to form a community that can work together and benefit each other.

This mission is the first goal that will be done to realize our vision based on the conditions and challenges that exist today.
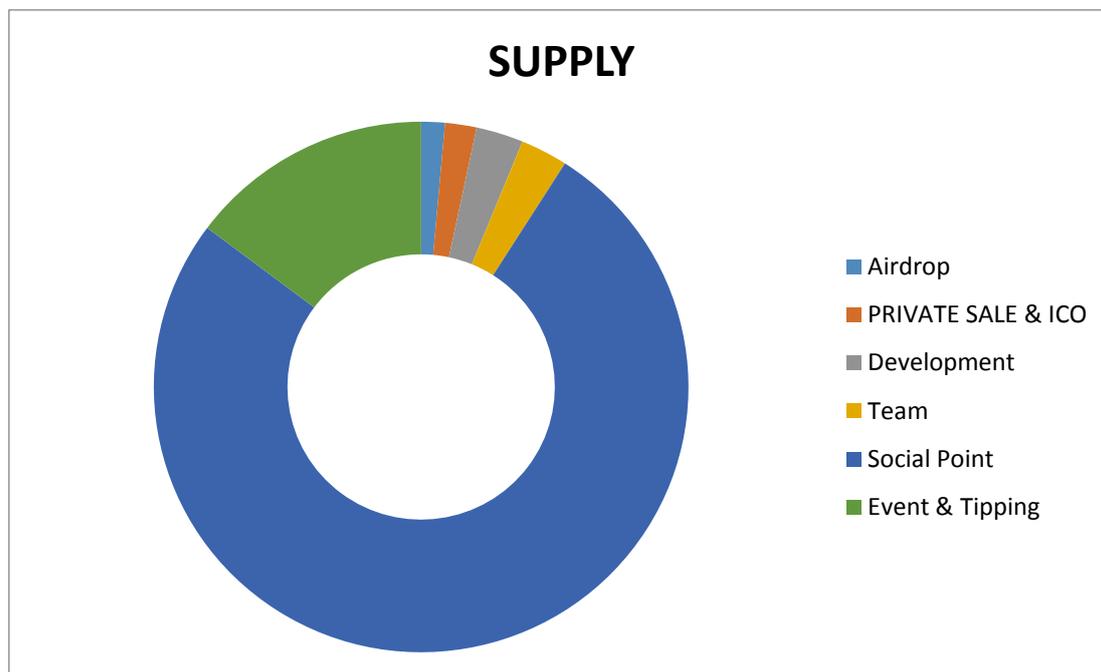

BLOCKCHAIN STELLAR NETWORK

After researching some of the existing Blockchain Networks, we decided to create an SCN Token on Stellar Network. The decision was taken because Stellar Network has specifications and supports technical matters that we need to carry out the planned strategies.

The Stellar ecosystem is also equipped with Stellar Distributed Exchange (SDEX), which can be directly used by all tokens on Stellar Network.

Detailed information about Stellar Network and its ecosystem can be seen at https://www.stellar.org/developers/guides/get-started/index.html.

SCN DISTRIBUTION TOKEN

SUPPLY

- Airdrop
- PRIVATE SALE & ICO
- Development
- Team
- Social Point
- Event & Tipping

We make 3,000,000,000 SCN Tokens on the Stellar Blockchain Network where 70% of the total supply will be distributed to each SCN member.

• Airdrop

We provide 2,000,000 (0.07%) tokens for new members and fill in the requirements needed in the Google Form. Each member will get 100 SCN. Airdrop is distributed every Sunday until the airdrop tokens run out.

• PRIVATE SALE & ICO

We have prepared 3.000.000 (0.10%) tokens for ICO and can be purchased at the SDEX market such as stellarport, interstellar and stellarx.

• Development

About 100.000.000 (3.33%) we allocate for SCN Token development projects along with operational costs

• Team

100.000.000 (3.33%) of the number of tokens allocated to the team

• Social Point

We prepare 2.750.000.000 (91,67%) tokens for SP for SCN holders.

• Event & Tipping

45.000.000 (1.50%) available for event & tipping

SOCIAL POINT

SP or Social Point is a daily bonus that will be given to SCN holders. Every hold of SCN Token with a minimum of 100 ballances will get a bonus of 1% (SP) every day and multiples apply. The bigger the SCN ballance hold, the more SP. SP will be distributed every Sunday sent to Stellar wallet.

We provide this SP to SCN holders as a form of gratitude for buying or holding SCN Tokens on the Stellar Wallet. Hopefully with the SP, it can prosper the holders or members.

SP can be used in the online Marketplace that we provide. In the online marketplace, members can search for daily needs such as products and services provided by the Seller.

ONLINE MARKETPLACE

Online Marketplace is used to accommodate and provide a place for members who have products or services to be exchanged for Social Points. The exchange process is carried out directly between members who have a Social Point with member members who provide products or services.

The direct impact with the flow of SP to Marketplace Online is the reduced flow of SCN Tokens exchanged on SDEX. Meanwhile promotions continue to be carried out because the existence of the Online Marketplace is an attraction that can make people easily decide to join the Social Network Token

ROAD MAP

2017

Build up Team, Concept, Analitics and Desaign Project

2018

Introduce Token, Airdrop, ICO and Daily Bonus

2018

Expand Networks and Communities by Register on SDEX

Q2 2019

Launch of Digital Web Payments for Communities and White Book Released

Q4 2019

2 Billion Holder Tokens

social network

SUPPORT
